

Quintillion Consulting's Vendor Management Service

Vendor Management

Many organizations use vendors to augment core business capabilities and innovatively deliver products and services. These partnerships introduce risks that companies might not even be aware of – especially when the responsibility for managing those risks lies outside of your organization.

Breaches, data exposure, and regulatory non-compliance can cause serious negative repercussions for your company, making it more important than ever to validate whether key vendors are adequately safeguarding your interests, or placing your organization at risk. What's the most effective way to get a handle on such a complex issue?

We make it simple.

Service Overview

Quintillion's Vendor Management Service provides a technology enabled approach for identifying and mitigating risks introduced by third-party relationships.

We identify and assess vendors in key areas:

- Information Security
- Information Technology and Architecture
- Regulatory Compliance (GDPR, PCI, SOX, etc.)
- Business and IT Resiliency

Benefits of our Service:

- Highly configurable risk assessments
- Scalable to coordinate a high volume of vendor risk assessments
- Manage all vendor assessments in one place
- Minimize resource time
- Securely request assessments from vendors
- Identify high risk vendors
- Collaborate on remediation plans
- Dashboards, reports and visual analytics you can share with auditors
